

Status of the Hanoi Powerplant, 6 November 1967

Restoration of the Hanoi Powerplant to partial operation has proceeded somewhat faster than had been anticipated. [REDACTED]

25X1

25X1

[REDACTED]
[REDACTED] This indicates a minimum operating level of 30 percent of installed capacity, and a maximum of 50 percent if the boilers in operation are working at full capacity. There is no evidence of progress in repairing bomb damage to the turbine hall from the last airstrike of 26 October. Estimated severe damage to two turbines from strikes in August and October probably will limit output to no more than 75 percent of capacity for another six months.
